## MACHINE

## Question 1

The diagram below is a block-and-tackle pulley system in which an effort of 80 N is used to lift a load of $240 N$. The efficiency of the machine is $\{2001\}$
A. 40\%
B. 33\%
C. $60 \%$
D. 50\%.

Solution
Velocity ratio $=$ number of pulleys $=6$

$$
\begin{gathered}
M \cdot A=\frac{l o a d}{\text { effort }}=\frac{240}{80}=3 \\
\text { efficiency }=\frac{M \cdot A}{V \cdot R} \times 100=\frac{3}{6} \times 100=50 \%
\end{gathered}
$$

D is the correct answer

The earth is four times the size of the moon and the acceleration due to gravity on the earth is 80 times that on the moon. The ratio of the mass of the moon to that of the earth is(gravitational force 2004)
A. $1: 320$
B. $1: 1280$
C. $1: 80$
D. 1:4

## Solution

size of earth $=4 x$ size of moon
G of erath $=80 \times \mathrm{g}$ of moon

A bead traveling on a straight wire is brought to rest at 0.2 m by friction. If the mass of the bead is 0.01 kg and the coefficient of friction between the bead and the wire is 0.1 , determine the workdone by the friction.
A. $2 \times 10^{-4} \mathrm{~J}$
B. $2 \times 10^{-3} \mathrm{~J}$
C. $2 \times 10^{1}$ J
D. $2 \times 10^{2} \mathrm{~J}$
[ $\mathrm{g}=10 \mathrm{~ms}-\mathrm{t}$.]
